Article: <i>Technopreneurship: Empowering Innovation Through Emerging Technologies</i>	3
Reflection Essay	6
Appendix	9

SKUDAI, June 2025 - the Faculty of Computing proudly hosted the *Technopreneurship: Empowering Innovation Through Emerging Technologies* program at N28a.

Post graduate student is explaining their research to experts

The one-day event, designed for students, professionals, and aspiring techno-entrepreneurs, aimed to foster a culture of innovation, exploration, and entrepreneurship. Held at N28a, the program provided a dynamic platform for participants to gain insights into the latest technological trends and how they intersect with entrepreneurial ventures. The atmosphere was both exciting and inspiring, with a well-curated mix of expert-led lectures, interactive showcase booths featuring emerging technologies, hands-on challenges that tested creativity and problem-solving skills, and a lively food truck lineup that added a festive touch to the experience. The event successfully brought together minds from diverse backgrounds to connect, learn, and spark ideas that could shape the future of technology and business.

As part of the event, a series of industry talks were held at Dewan Kejora featuring four invited speakers from diverse professional backgrounds. The session aimed to expose participants to current trends and real-world insights from the field of robotics, telecommunications and human resource development. Each speaker shared their experiences, the challenges faced in their industries and offered advice to students on how to prepare for future careers in an evolving digital landscape.

Among the speakers were Dr. Yeong Che Fai who is known for his work in robotics and automation, Mr. Chan Weng Hun from Huawei Malaysia who likely touched on advancements in ICT and Mr. Russell Marland who emphasized the importance of soft skills and career readiness. The talks were engaging and informative, offering attendees a chance to learn from industry experts and broaden their understanding of the professional world beyond the classroom.

Attendees focusing on the talk

As part of the program, participants had the valuable opportunity to engage with several showcase companies, which are Cyberport, Huawei, Lattle, NexScholar, RunCloud and TG Recruitment Agency, each bringing unique expertise and inspiration. Cyberport highlighted its role as a hub for nurturing tech startups and digital innovation while Huawei captivated attendees with insights into cutting edge digital infrastructure. Moreover, Lattel impressed with its creative blend of design and functionality, sparking ideas among aspiring entrepreneurs. NexScholar also presented its modern approach to education and career development while Runcloud introduced its streamlined cloud server management platform tailored for developers and businesses. Meanwhile, TG Recruitment Agency offered practical advice on aligning skills with industry demands. Together, these companies enriched the program by bridging industry trends with future talent.

Some of the companies that come to UTM for a showcase

Other events that were being held at the same time

Alongside the main seminar activities, a variety of side events were organized to boost student involvement and create a fun yet competitive atmosphere. One standout event was the UTM Pokémon TCG Pocket League, held at Bilik Tutorial, N28A. This competition gave students a chance to showcase their strategic thinking and decision-making skills through the beloved mobile card game, Pokémon TCG Pocket. Sixteen participants battled it out for the title of UTM Pokémon Champion, with cash prizes awarded to the top three players. Additionally, a Typing Competition is hosted and powered by TypeRacer at the same location. This event was designed to test participants' typing speed and accuracy through a series of endurance and elimination rounds, culminating in a final showdown. The top three typists received prizes, and there was even a special award for the individual with the highest Words Per Minute (WPM) score. These side events not only enhanced the seminar by encouraging healthy competition but

also offered students a chance to hone essential soft skills like focus, quick thinking, and digital proficiency.

A small talks that happened at different room

Alongside the main seminar, there was a smaller talk session by Dr. Mazlan Abbas, CEO of Favoriot called “Empowering Communities Through Digital Innovation”. This session zeroed in on how we can use digital technologies to tackle community issues and enhance our quality of life. Participants gained valuable insights into the real-world applications of digital innovation at the grassroots level, emphasizing how technology can drive social change while also fostering entrepreneurial growth.

Group Reflection

As a part of the content creation group in the marketing team, we, Adriana, Dayang, Farra, Safiya, and Yasmin, worked together to complete two main tasks which were recording pre-event video and designing a t-shirt. During the t-shirt design process, we made several changes to ensure the design matched the event theme. We carefully choose the right colours, fonts, and overall layout. To make sure our design met the expectations, we consulted our Person In Charge, Arshad, and asked him to confirm the final design with the High Council. This two-way communication helped us achieve mutual agreement and improved the quality of our work.

Throughout the project, we shared ideas, discussed improvements, and supported each other in making decisions. This experience helped us improve our teamwork, creativity, and communication skills. We are proud of what we have achieved together and are grateful for the opportunity to contribute to the event through our content creation efforts.

 Content Creation Group, of Marketing Team for Technopreneurship:
Empowering Innovation Through Emerging Technologies

On Friday, 26 June 2025, we had the privilege to contribute to the Technopreneurship: Empowering Innovation Through Emerging Technologies seminar held at N28a, Faculty of Computing, Universiti Teknologi Malaysia (UTM). This enriching one-day event brought together students, professionals, and budding technopreneurs to dive into how emerging technologies are influencing innovation and entrepreneurship.

As part of the Content Creation Team under the marketing division, my team and I were entrusted with the exciting responsibility of creating the official promotional video for the pre-event, as well as designing the program's official t-shirt. These projects called for in-depth planning, teamwork, and a lot of creative ideas. During this process, we consulted closely with our Person-in-Charge, to ensure that the final version received the green light from the High Council. The experience not only boosted our creative and communication skills but also gave us a deeper understanding for the role of the visual identity in event branding.

A major highlight was the Industry Talk sessions held at Dewa Kejora, featuring insights from Mr. Chan Weng Hun (Huawei Malaysia), Dr. Yeong Chee Fai (DF Automation & Robotics), Mr. Russell Marland (TG Group), and Dr. Mazlan Abbas (Favoriot). These assembly provided a wealth of knowledge on emerging technologies, the real challenges faced in the industry, and the crucial role of professional development and maintaining a strong digital presence.

Also, our team captured various highlights of the program, including showcases from organizations like Huawei, Cyberport, NexScholar, RunCloud, and TG Recruitment

Also, our team captured various highlights of the program, including showcases from organizations like Huawei, Cyberport, NexScholar, RunCloud, and TG Recruitment Agency. We also enjoyed some interactive side events, such as the Pokémon TCG Pocket League and the Typing Competition, which really added to the overall experience.

This experience has really opened my eyes to how crucial content creation and marketing are in bridging the gap between academia and industry. It's also helped me sharpen my teamwork, time management, and communication skills. I'm genuinely grateful to Prof. Madya Dr. Ramesh KS @ Mohd Zaidi bin Abd Rozan for his unwavering support and guidance throughout this program.
