What E-ducator Does

One system, five roles — from lecturers marking attendance to the academic director reviewing trends.

Admin

Full system control & account approvals

Timbalan Pengarah Akademik

Tindakan Pantas

Built with Flutter + Supabase

Bulk Student Upload

Admin uploads hundreds of student records in one CSV — instead of typing each one in by hand.

Column validation

Checks required headers exist before anything is processed.

Row-by-row error reporting

Flags exactly which rows/fields are missing or malformed — no silent failures.

Safe re-upload

Duplicate student IDs are updated, not duplicated.

Upload file in CSV format only

Muat Naik Data Pelajar

Format CSV Diperlukan

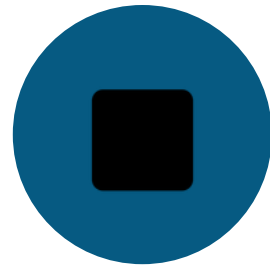

Baris pertama mesti mengandungi pengepala berikut (susunan bebas):

full_name, student_id, program_id, kelas

Contoh baris data:
Ahmad Bin Ali, DGS24001, DGS

Tiada fail dipilih

Pilih Fail CSV

Timetable Upload & Conflict Lock

A weekly grid view that stops double-bookings before they happen.

Conflict check on save

Same room, same time slot, different class → the system blocks it, not the user.

Role-based editing

Admin / Ketua Jabatan / Ketua Program can edit; lecturers view only.

One tap to attendance

Tapping a class on the grid opens that exact session's attendance sheet — no re-searching for the date.

Attendance Grid — M1 to M18

Complete semester attendance in one interactive view.

Full-semester view

View and update attendance for the entire semester without changing pages

Live attendance calculation

Attendance percentages are calculated instantly after each update.

Integrated reporting

TAttendance records are reused by dashboards and warning letter generation, eliminating duplicate data entry.

Hantar Kehadiran — Minggu 2

What We Learned

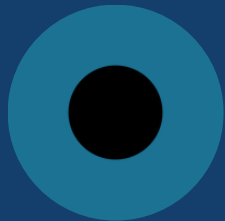

Real users break your assumptions

Designing for 5 different roles meant every screen had to ask “who is allowed to see or touch this?” - not just “does it work?”

Data integrity beats clever UI

Conflict checks and CSV validation taught us that catching bad data on the way in saves far more time than fixing it later in Supabase.

Working with a real client changes scope

Feedback from IKM Johor Bahru meant rebuilding the attendance UI mid-project - flexibility mattered more than sticking to the original plan.

Thank You
