LAB ASSIGNMENT 1

TITLE : DAILY ACTIVITIES RECORDER APP

PREPARED BY : INDIVIDUAL

NAME	MATRIC NO
NURUL ADRIANA BINTI KAMAL JEFRI	A23CS0258

PREPARED FOR:

DR. AHMAD NAJMI BIN AMERHAIDER NUAR

OBJECTIVE

The objective of this assignment is to apply the basic Flutter development concepts learned in Lesson 1 to 3. Students will build a simple Flutter application that can record daily activities, practising key skills such as Flutter project structure, widgets and layout, state management using `setState()`, text input using `TextField`, and displaying data in a list.

BRIEF DESCRIPTION OF THE SYSTEM

The Daily Activities Recorder is a simple mobile application built using Flutter. It allows users to record their daily activities by entering an activity name and a time or category. The recorded activities are displayed as a list on the screen, and each activity can be removed individually using a Delete button. The system does not use any database or complex state management –it relies purely on basic Flutter concepts to manage and display data in memory.

EXPLANATION OF THE INTERFACE

The app interfaces consists of the following parts;

- **Activity Name Field:** A text input where the user types the name of the activity they want to record, for example “Study Flutter” or “Jogging”.
- **Time / Category Field:** A second text input field where the user enters either a time (e.g. “10:30 AM” or a category label (e.g. “Sleeping”) to describe when or what type the activity is.
- **Add Activity Button:** When pressed, this button reads both input fields and adds the activity to the list. If either field is empty, a warning message is shown instead.
- **Activity List:** A scrollable list that displays all recorded activities. Each item shows the activity name, its time or category, and a numbered label. The list updates instantly whenever an activity is added or deleted.
- **Delete Button:** Each activity in the list has its own Delete button. Pressing it removes that specific activity from the list immediately.

SCREENSHOTS OF THE APP

A browser window titled "Daily Activities Recorder" is shown at the URL "localhost:62188". The app has a blue header with the title. Below it is a form with three input fields: "Activity Name" (with a list icon), "Time / Category" (with a clock icon), and a blue button labeled "+ Add Activity". Below the form, there is a section titled "ACTIVITIES (0)" with a list icon. The main content area is empty, displaying a message: "No activities yet. Add one above!" with a calendar icon.

The same browser window is shown, but the form is now filled with data. The "Activity Name" field contains "GRWM", the "Time / Category" field contains "7:00 AM", and the "+ Add Activity" button is still present. The "ACTIVITIES (0)" section remains empty, displaying the same message: "No activities yet. Add one above!" with a calendar icon.

CONCLUSION

This assignment successfully demonstrates the core concepts of Flutter development covered in the first three lessons. The Daily Activities Recorder app was built using a `StatefulWidget` with `setState()` to manage and update the list of activities in real time. `TextField` widgets handle user input, while a `ListView.builder` displays the data clearly and efficiently. The app is simple, functional, and easy to use, meeting all the stated requirements of the assignment. Through this exercise, a better understanding of Flutter's widget-based structure and basic management was gained.
