PERSON'S AIRPODS

DESIGN THINKING

- an increase on creativity that lets you create solutions for final consumers while keeping only one problem statement in mind. It can help you progress in your job in addition to teaching useful skills (Emphatize, define, ideate, Prototype and Test) .

INFORMATION SYSTEM

- a collection of people , procedures , software , hardware , data and the Internet
- work together to provide information essential to running an organization

PERSON'S AIRPODS

RELATIONSHIP BETWEEN INFORMATION SYESTEM AND ARTIFICIAL INTELLIGENCE (AI)

Artificial intelligence (AI) is closely related to information systems. Information systems are designed to manage, process, store, and retrieve information, while AI involves the development of systems that can perform tasks that typically require human intelligence. The intersection of AI and information systems brings about several connections and applications.

En Jaafar Sidek bin Harun

Vice President of Strategic
Department in UTM Digital

i. EMPATHY

What We Discover?

- has been working in digital center and UTMdigital for total of 31 years.
- working field was leaner to infrastructure, and currently are focusing on strategic department.
- believes the 'prototype' and UTMsmart (e-learning) possess all of the characteristics of an effective scholastic information technology system for a university.
- main complaint: less digital experience among the users and no high knowledge of blockchain in order to improve data of AI.
- not many in UTM are using AI technology

ii. DEFINE

START

FOLLOWING

...

1. Lack of interaction between a user and organization

we can add an FAQ (Frequently Ask Question) and manual guide for the new user

2. Add security for better privacy

we can add palm and face recognition for user

3. Improve product are significant in reducing cost

better at lessening the cost rather than the old ones, since it doesn't required a lot of maintenance in hardware and software aspects

iii. IDEATE

START

FOLLOWING

...

Based on our discussion :

- we considered some very important aspects on completing the program such as the user's interface and the effectiveness of the model
- Eg : notification will appear if any strangers try to breach on a particular data.
- model -> user friendly so that the user can easily understand and navigate through the model in an efficient way

iv. PROTOTYPE

START

FOLLOWING

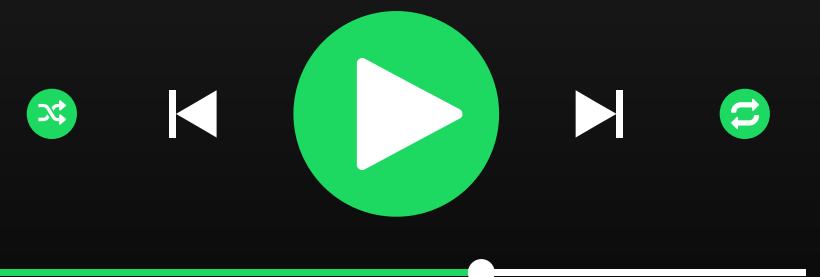

...

- made our logical design to physical design
- agree to address the problems that users and developers experience from time to time
- did some analysis on the existing model along with their lack of intuitive and user-friendly interface software that suits our user's needs

v. TESTING

START

FOLLOWING

...

For our testing, Mr. Jaafar was mostly satisfied with it and could not think of any further improvements. But when we presented it to other users, they had some valid thoughts about the product. Some of their suggestions will be of prime importance if we want to spread the usage of improved product.

They suggested to:

- Integrate the model in every classes, lecture halls, laboratory.
- Make a use for attendance and security purpose ; prevent for any strangers to access any data in the improved product
