SECP3843 - SPECIAL TOPIC IN DATA ENGINEERING

PPG INDUSTRY QUESTIONNAIRE

PREPARED FOR : PPG

PREPARED BY : GROUP 4

NAME	MATRIC NO
MUHAMMAD NAIM BIN ABDULLAH	A23CS0134
JOANNE CHING YIN XUAN	A23CS0227
SABRINA HENG WEI QI	A23CS0265
NURUL ADRIANA BINTI KAMAL JEFRI	A23CS0258
JEANETTE HAUW CHANDRA	X25EC3020
DAMIYA AINA BINTI BASIR ABD SHAMMAD	A23CS0220

Question :

1. How is data consistency maintained across different systems (inventory, production, sales)?
2. What type of alerts or thresholds should be visualized in the dashboard?
3. How does data managing help in improving production efficiency or reducing defects?
4. In manufacturing, sensor data can be noisy. How to ensure data quality before using it for decision making?
5. Can you share a data engineering mistake that taught your team an important lesson?
6. How does working with SAP systems influence your data engineering design compared to non-SAP environments ?
7. For the Bronze layer, we must apply basic data quality checks including null detection, type validation, and duplicate handling. Based on your experience, what are the most common data entry errors we should anticipate simulating in our pipeline?
8. The dashboard needs to answer seven specific questions, including identifying which open customer sales orders will be affected by a shortage. Who is the primary target audience for this dashboard ?
9. Is your data centralized or stored across multiple systems?
10. Do you currently use automated data pipelines? If yes, what tools?
11. When a shortage hits multiple customers, how does **PPG** decide who gets stock first in the data model?
12. Do the **9-month dead stock** or **RA thresholds** change based on the specific type of chemical or material?
13. How do you ensure automated **Magna Carta provisions** are accurate enough for the Finance department to use?
14. What is the biggest challenge in keeping **lot expiry dates** accurate in a live production environment?
15. Do you move older **Bronze layer** data to cheaper **Archive storage**, or keep it all "hot" for trend analysis?
16. As material volume grows, do you prefer partitioning your **Silver layer** by material category or by date?
17. Does the system trigger **automatic stock transfers** once a "Recoverable Asset" is identified, or is it human-led
18. What is the **"must-have" metric** the logistics managers always ask for?
