

TeaGel EcoFresh

by group 1

INTRODUCTION

Introducing a sustainable, dual-action solution: a solid gel air freshener and natural pest repellent crafted from upcycled used tea leaves. This chemical-free product made from tea waste effectively neutralizes odors while creating a barrier against household pests. This innovation offers a safe, eco-friendly alternative to synthetic insecticides, turning the abundant waste into a valuable tool for safer indoor air.

S - Substitute: Partnering with centralized industrial collection (e.g., hotel chain) for consistent supply.

C - Combine: Mix the tea extract with natural repellents to boost effectiveness against specific pests.

A - Adapt: Create different formulations adaptable for different rooms (e.g., kitchen vs bathroom).

M - Modify: Increase the ratio of tea waste extract to make the repellent radius larger.

P - Put to another use: The dried gel can be used as plant fertilizer.

Strength

- Eco-Friendly & Sustainable
- Dual Functionality
- Natural Ingredients

Weakness

- Limited Market Awareness
- Shelf Life Concerns
- Production Cost

Threat

- Competition from established brand
- Market Price Sensitivity
- Environmental Factors

Opportunity

- Growing Eco-Conscious Market
- Partnerships
- Educational Marketing
