SECP3213: BUSINESS INTELLIGENCE 2025/2026 – SEMESTER 2

LAB 2 (7%)

Problem Statement

A bank manager has observed an increasing number of customers leaving the bank's credit card services. To reduce customer attrition, the bank would like to identify customers who are likely to churn so that proactive retention strategies can be implemented.

Part 1: Credit Card Customer Churn Prediction

Develop an **Alteryx Designer** workflow to predict customer churn using the dataset provided. The target variable is *Attrition_Flag*. You are required to perform data preparation, including transforming categorical variables into numerical values. Build and compare at least **two predictive models** and determine the best-performing model.

Part 2: Credit Card Customer Churn Dashboard

Develop an interactive dashboard in Power BI to visualize the credit card customer churn dataset. The dashboard must present at least five meaningful analyses or insights from the dataset. The dashboard should incorporate interactive features to enable users to explore the data and better understand the analysis.

Submission Date : 4 July 2026

Deliverable:

- Final Report: PDF (Lab2_GroupName.pdf)
- Alteryx Workflow: lab2_group.yxmd
- Visualization File: lab2_group.pbix
